

## Multi-Survey System

### Survey, Monitoring & Assessment Module

**Do you carry out Course Evaluation Surveys, Student Monitoring or Assessments as part of your quality control criteria?**

**Are the number of your online returns poor due to apathy and unreliable internet access?**

**Are you looking for a solution that can work anywhere?**

If yes to any of the above then why not consider the **Trax Solution** and read on –

- **Create** - your own survey and assessment sheets using our intuitive **form designer**.
- **Monitor** – your returns to ensure **maximum participant feedback!**
- **Generate** - **statistical** and **graphical analysis** instantly.
- **Use** - paper, online or a combination of both technologies together.
- **Full support** - as standard from a company with over 25 years' experience.

### FORM DESIGN

Unique features include powerful 'drag and drop' facilities that allow you to create, copy and move text or answer boxes on the screen, which automatically adjust their position in relation to the form scanning points. **No Need** to specify each area where answer or text boxes exist. Rich text format fully supported for any font type, style or size plus a built-in clip art/picture and mail merge facility for names, course and other details. You can create/generate your own questionnaires electronically or on paper quickly and easily in black & white or full **colour** and in size measurements from A5 to Legal including the standard A4 and letter formats.

### PROJECT DETAILS/TASK

A comprehensive and flexible **MS SQL** project database is included, which allows you to create your training evaluation, monitoring or survey details. Personal details such as course, name, age etc. may also be included, with the information transferred from other systems, entered manually or captured from your forms. Once project details are entered and a questionnaire form created, you simply distribute them either electronically or by printing and then handing them out for completion.

### PROCESSING

On return, paper based forms are scanned using OMR/Image Scanning and the feedback data processed. Electronic forms are retrieved from the web server and the results stored for later analysis or by linking to statistical packages such as MS Excel or to other MIS or CRM software systems.

### REPORTS

A range of reports and analytical information, including graphical displays, structured query formats and longitudinal time based analysis are built into the software. Alternatively data is easily exported to other systems such as *Excel*, *SPSS* etc. Specialized *SQL* or *Access* macros for specific reporting requirements can also be written.

**Multi-Survey** is used in all areas of Industry, Commerce and Government, including Local Authorities, Education and Healthcare, for market research, training, quality monitoring etc. or any task where monitoring, assessment or survey data needs to be captured, stored and analysed quickly, efficiently & cost effectively.
